Perfect 32 dental care

*"Let us take care of you
and your smile"*

Digitalized RCT

Advances in dentistry has enabled us to give you better treatment using better instruments and techniques. Much more accurate and effective treatment improves the life of your tooth to greater extent.

- Comfortable to the patient
- Higher accuracy
- Takes less time
- More reliable
- Less chances of complications
- Improves longevity of the treatment

ORTHODONTICS
Affordable braces treatment for crooked teeth.

Free replacement warranty over Caps and Bridges (5 - 15 years)

For extended patient satisfaction, we provide the patient with a written commitment promising longevity of artificial teeth replaced and hence assuring the patient of genuine materials being used to fabricate them.

INFECTION CONTROL

We practice strict sterilization protocol as recommended under IDA guidelines.

Needless to say that the disposables like needles, syringes, glasses, suction tips etc are all for one time use and are discarded after one use.

We Follow Four Tier Sterilization Protocol

Tier 1

All the instruments are scrubbed thoroughly with isopropyl alcohol Swabs To Remove Any Attached Debris.

Tier 2

Antiseptic Dip: After use the instruments from each patient are dipped in saturated solution of an Antiseptic for at least 12 hours.

Tier 3

Dried instruments are then packed in sterilization pouches (eco friendly reusable and not plastic) and sterilized using an Autoclave. This a high pressured steam chamber where instruments are placed at a specified temperature to kill all the micro organisms including their spores.

Tier 4

Sterile instruments are then kept in UV chambers till required by the staff

DIGITAL IMAGING

The modern digital X-ray carries several benefits to patients. At Perfect 32 Dental Care, we go the extra mile to invest in technology that means more to our patients and their treatment processes. Some of these benefits are...

- Cleaner!
- Faster!
- Precise and Clear diagnosis every time.
- Better practice management
- Lower radiation doses to patients and clinicians alike, hence enhanced safety.
- No harmful chemicals. No mess. Environment friendly.

[Intra Oral Camera]

People rarely have a clear idea of the actual state of their dental health. Even with lights and mirrors it's hard to see what the dentist can – that is, until now.

We use intraoral cameras, so during your check up, you can sit comfortably back in the chair and get ready to learn about what's going on in your mouth. so you'll become an informed partner in your dental treatment instead of a clueless bystander.
